Summary Information for the Draft Idea for a Gross Operating Revenues Tax for Utilities, Pipeline, and Railroad Property

Overview

In January 2024, the Minnesota Department of Revenue introduced a preliminary idea to remove utility, pipeline, and railroad operating property from property tax and replace it with a gross operating revenues tax. For the document and video summarizing our idea, please see our [website](#).

Revenue is committed to continuing the conversation on this idea. Currently, the department does not have intentions of proposing legislation on this idea.

Summary Information and a Hypothetical Rate

This document is meant to be responsive to the comments, concerns, and questions requesting the financial impact of this idea. It provides an **estimate** of a potential impact of this idea under a set of assumptions. The analysis may change depending on the rate selected, availability of additional data, any refinements to the idea, and further analysis on other tax impacts, including fiscal disparities and many other factors.

The department is not advocating for a rate, but we can provide an estimate of the financial impact of this idea by using **hypothetical rates**. Therefore, the hypothetical rates in this analysis were selected to remain revenue neutral at a statewide level. The department cannot make changes to the current system alone. The Legislature needs to approve changes to the current system and set rates. We have made several preliminary assumptions as part of this analysis, which we explain in the addendum.

The revenue neutral assumption is at the aggregate level. There are still shifts within individual jurisdictions due to the complexities of the current system. State assessed apportioned market values include county, city/township, and parcel level data. We are not able to identify school district or special taxing districts for these parcels.

The overall difference of an estimated gross operating revenues tax for all Minnesota counties (including all taxing jurisdictions) is a net increase of \$162,337 compared to the 2024 taxes payable using the 2023 assessment year certified values under the current system. This intent of this idea is to find a way to simplify the current system while creating a system that is objective, transparent, and predictable.

Addendum: Analyzing the Data

This document is intended to be responsive to the comments, concerns, and questions requesting how this idea directly impacts the counties, cities, townships, and other local jurisdictions, and companies. It provides an **estimate** of a potential impact of this idea, under a set of assumptions. The analysis will change depending on the rate selected and as more data becomes available, any refinements to the idea, further analysis on other tax impact including fiscal disparities and many other factors.

Summary Information

The department cannot provide an estimate of the financial impact of this idea without using **hypothetical rates**. Therefore, the hypothetical rates in this analysis were selected to remain revenue neutral at a statewide level.

The revenue neutral assumption is at the aggregate level. The overall difference of an estimated gross operating revenues tax for all Minnesota counties (all taxing jurisdictions, including the state general levy) is a net increase of \$162,337 compared to the 2024 taxes payable using the 2023 assessment year certified values under the current system. This is less than a 0.02% change at the aggregate level.

There are several assumptions in this analysis. The biggest assumption is the rate. The Legislature needs to approve changes to the current systems and set rates. The department cannot make any changes to the current system alone.

Steps in Analysis to Arrive at Summary Information

1. We used the state assessed apportioned market values for utility, pipeline, and railroad operating property for the 2023 assessment year. The 2023 assessed values are used to calculate taxes payable in 2024. Apportioned market values were reduced for the sliding scale market value exclusion, where applicable.
 - a. Source of state assessed apportioned market values: Market Value section of the [Property Tax Data & Statistics webpage](#)
 - b. State assessed apportioned market values include county, city/township, and parcel level data. We are not able to identify school district or special taxing districts for these parcels.
2. We applied the effective tax rate for taxes payable in 2023 to the state assessed apportioned market values, by city/township. We'll update this analysis when the 2024 tax rates are available.
 - a. Source: Interactive Reports available on the [Property Tax Data & Statistics webpage](#). Selecting: Category - [19] Effective Tax Rates; Year – 2023; County - All; and City/Town - All.

The Public Utility Effective Tax Rate was multiplied by the utility and pipeline apportioned market value, at each parcel provided in the spreadsheet in step 1.

The Railroad Effective Tax Rate was multiplied by the railroad apportioned market value, at each parcel provided in the spreadsheet in step 1.

If a city/township did not have an effective tax rate, the countywide average of either the Public Utility Effective Tax Rates or Railroad Effective Tax Rates was used.

3. We summed the tax estimate under the current system for each city/township and for each county.
4. If we had gross operating revenues and allocation information available, we estimated the amount of gross operating revenues tax for those companies. The estimate used rates varying by market segment, and tiered within a market segment, where applicable to remain revenue neutral.

There were natural tiers in some of the market segments and other market segments did not have natural tiers. Therefore, some market segments have a tiered rate based on operating revenues and other market segments do not.

For companies that we do not have gross operating revenues and allocation information, we estimated zero change in tax.

5. We spread the gross operating revenues tax to each parcel with a state assessed market value.

For companies that we estimated zero change in tax, the tax within each city/township and county still changed. This is because the apportioned market value is spread out by original cost at each unique taxing area, and then the tax rate is applied (after additional calculations by the county). In the gross operating revenues tax idea, the tax is distributed based on original cost at each unique taxing area and there is no additional change based on the unique taxing area in which the property is located. The tax estimate for the company did not change, but how it is spread to each unique taxing area did change.

6. We summed the tax estimate of the gross operating revenues tax idea for each city/township and for each county. The summed tax represents the tax amount for all levying jurisdictions, including the state general levy.

Example: The amount of tax listed for Aitkin Township represents the taxes collected in Aitkin Township for all levying jurisdictions, including the state general tax.

7. We compared the estimated of taxes payable under the current system to the estimate of taxes under the gross operating revenues tax idea.
8. We then compared the difference to the city/township levy and county levy for taxes payable in 2023.
 - a. Source: Interactive Reports available on the [Property Tax Data & Statistics webpage](#). Selecting: Categories - [9] County Levies, [10] City/Town Levies, [11] School District Levies, [12] Special Taxing District Levies, [13] Other Local Levies, [14] State Levies; Year – 2023; County - All; and City/Town - All.

Gross Operating Revenues

Detailed income and expense data and financial forecast data is private or non-public data under [Minnesota Statutes, section 13.51](#), subdivision 2; therefore, we cannot disclose specific company amounts.

The current valuation methodology for utility and pipeline operating property uses a weighted average of the past three years' net operating income figures. The current valuation methodology for railroad operating property uses a straight average of the Net Railway Operating Income for the previous five years.

Companies generally do not provide forecasted financial information to the department.

With the data we have, there has been an 11% increase per year in net operating income, on average, since 2015, for all companies. To find that, we took the average percent change in net operating income for each year since 2015 and averaged that for each company and then calculated an average of each company's average. If we look at 2022 net operating income compared to 2015, we see an increase of 66.97% based on an average of all companies.

Doing the same calculations using gross operating revenues instead of net operating income, we see an average annual percent change for all companies of 15.47% and an average change in 2022 over 2015 of 75.61%. The standard deviation in the annual percent change calculations is 0.687 for net operating income and 0.1934 for gross operating revenues. This indicates the percent change for gross operating revenues are less spread out than the percent change for net operating income.

The Minnesota Apportionable Value for the operating property of these same companies increased 38% for all companies combined in 2023 compared to 2015 assessment years. The average of each company's annual percent change is a 6.39% increase.

Power Line Credit

This idea, in its current form, would repeal the [power line credit](#). The power line credit is a credit some property owners receive when qualifying transmission lines cross over their property.

The average power line credit for taxes payable in 2023 was \$170.62, with 4,091 parcels receiving the credit.

Criteria	Amount
Average credit per parcel	\$170.62
Highest credit for any one parcel	\$1,965
Lowest credit	\$10.03
Number of parcels receiving the credit	4,091
Parcels with credit below \$100	2,045
Parcels with credit over \$500	282

Analysis of Rates

The rates applied to companies highlight some stark differences in current methodology. The larger companies tend to have a lower rate to equal the same amount of tax under the gross operating revenues tax calculation.

And smaller companies' have a larger portion of estimated market value compared to their gross operating revenues than larger companies.

Data Differences

After reviewing the State Assessed Property data and the data available through the Property Tax Data Tool there appear to be some key differences. The data in the Property Tax Data Tool comes from PRISM data, or what the counties report from their system. Differences between PRISM and State Assessed Data can be attributable to counties reporting State Assessed data into their system differently than what is expected.

For example, the department certified values for railroad operating property within one township at \$2,340,000, but the Property Tax Data Tool (which has PRISM data), shows zero for railroad estimated market value in that township. The department's certified values for railroad operating property are by order, they are not recommended values. This is not to point out any issues with how the counties are taxing these properties, it is to emphasize the differences in the data sources for the information we used in our analysis.

The department either orders or recommends estimated market values for utility and pipeline operating property, depending on the property type. However, it is unlikely the difference in the total public utility estimated market value and the estimated market value from the State Assessed records can be attributed to counties not using the recommended values. It is more likely that there is a difference in how companies report these properties to State Assessed and how counties are reporting these properties in PRISM.

The total Public Utility EMV from the Property Tax Data Tool is \$7,642,385,000. The total EMV for utility and pipeline operating property from State Assessed is \$18,735,720,000.

Reporting railroad operating property in PRISM is a little more straightforward than reporting utility and pipeline operating property because there are not numerous categories of property types. It is only railroad operating property. The total Railroad EMV from the Property Tax Data Tool is \$2,620,243,100. The total EMV for railroad operating property from State Assessed is \$2,607,028,000. The difference could be the portion of railroad operating property that is locally assessed. Railroad property is still taxable, even if the department is not assessing the property as part of the railroad operations of a railroad company.

The utility and pipeline property records had 2,192 records with utility and pipeline estimated market values and no effective tax rate provided in the Property Tax Data Tool; removing duplicates there are 782 city/townships with utility and pipeline operating property that do not have an effective tax rate for utility property in the Property Tax Data Tool.

The differences in estimated market values reported by city/township in PRISM and the city/townships for state assessed property in the certified values to the counties means the effective tax rate for these properties is not accurate in the Property Tax Data Tool.

Note: This document refers to property records. Property records are the records the utility, pipeline, and railroad company provide to the State Assessed Property Section. The Section uses those records to apportion (assign) the market value of the company's taxable operating property in Minnesota to each parcel with operating property.

City and Township Data

Some companies report operating property in these cities and townships that we do not have levy data:

County Name	City/Township Name
BROWN	NORTH HOME TOWN OF
CASS	NORTH CASS TOWN OF
SAINT LOUIS	RICE LAKE TOWN OF
STEARNS	DISTRIBUTION CITY OF

For cities and townships that we were not able to locate the public utility effective tax rate or railroad effective tax rate, we used the average of the respective rate by county. We also used the county average effective tax rate for property taxed at the countywide rate.

Several cities span more than one county. We estimated the tax by city/township within each county. If Company A reported operating property in City Seed within County Apple and City Seed within County Orange, we summed the operating property and estimated market value for that property by county. There is a value for City Seed in County Apple and a value for City Seed in County Orange.

For cities not located in their home county and for property taxed at the countywide rate, we did not compare those estimated tax changes to a levy amount.

Company Data

We used estimated market values for the 2023 assessment year (for taxes payable in 2024), less estimated market values of structures for railroad companies. We also used a reduced value related to any litigation or administrative appeal.

For companies that pay solar and wind energy production taxes, we reduced the gross operating revenues tax estimate by the amount of solar and wind energy production taxes payable in 2024.

Definition of Gross Operating Revenues

Gross operating revenues are revenues generated from the operations of the company before any deductions for expenses, taxes, depreciation, capital expenditures, dividend payments, etc.

Revenues generated from other business segments of the company, such as for internet services will not be included in the gross operating revenues amount.

Estimated Impact by County Using City-Twp Effective Tax Rate

County	Est. Utility, Pipeline, and Railroad Operating Property Tax	Est. Gross Op Rev Tax from Utility, Pipeline, and Railroad Operating Property	Difference	Percent Difference	Difference as % of Levy
